

PISON WHITEPAPER

The On-Chain Intelligence & Token Infrastructure Protocol

Version 1.0 | pisondapp.com | X: @Pisondapp | Telegram: t.me/pisondapp

Abstract

Pison is an on-chain intelligence and token infrastructure platform designed to simplify token deployment while providing advanced blockchain analytics tools for Web3 users, builders, traders, and investors.

The platform combines token creation infrastructure with real-time blockchain intelligence systems, enabling users to create advanced tokens, monitor wallet activity, analyze market behavior, detect whale movements, and access real-time transaction insights from one dashboard.

Vision

To become a leading on-chain intelligence and token infrastructure platform powering the next generation of Web3 builders and blockchain analytics.

Mission

Pison's mission is to simplify token deployment while transforming raw blockchain activity into accessible and actionable intelligence.

The Problem

The blockchain ecosystem contains valuable information, but most users lack the tools to interpret or utilize this data effectively.

Current launchpads and token creation tools often focus only on deployment while ignoring wallet intelligence, whale activity, smart money behavior, market tracking, blockchain analytics, and transaction monitoring.

The Solution

Pison provides a unified ecosystem where users can create advanced tokens, automatically verify smart contracts, monitor wallet activity, track whale transactions, analyze token movement, and access real-time analytics.

Core Infrastructure

Token Creation Infrastructure

- Simple token deployment with token name, symbol, and supply.
- Advanced token deployment with buy tax, sell tax, burn functionality, anti-whale protection, max wallet limits, and max transaction controls.

Smart Contract Verification Engine

- Contracts are submitted automatically for verification after deployment.
- Verification status can be monitored directly from the platform.

Wallet Intelligence Scanner

- Wallet balance analysis, activity scoring, whale classification, and transaction monitoring.

Token Analytics Dashboard

- Transfer tracking, real-time activity feeds, contract visibility, and explorer integration.

Multi-Chain Expansion

- BNB Chain is live. Base, Polygon, Ethereum, and Solana are planned as the platform expands.

Pison V2 Expansion

Smart Money Intelligence Engine

- Profitable wallet tracking
- Coordinated accumulation detection
- Early buyer analysis
- Sniper wallet monitoring
- Whale behavior interpretation

Risk Intelligence Scanner

- Honeypot detection
- Hidden tax analysis
- Ownership status verification
- Mint function detection
- Liquidity analysis
- Suspicious behavior scoring

AI Analytics & Predictive Intelligence

- Liquidity movement analysis
- Wallet behavior interpretation
- Momentum scoring
- Risk scoring
- Anomaly detection alerts

Revenue Model

- Token deployment fees for simple and advanced tokens
- Premium analytics access
- Whale tracking and alert subscriptions
- AI intelligence dashboards
- API infrastructure and enterprise monitoring tools

Tokenomics

Token Name: PISON

Total Supply: 10,000,000,000 PISON

Allocation	Percentage	Tokens
Initial Circulating Supply	3%	300,000,000
Seed Round	7%	700,000,000
Private Sale	10%	1,000,000,000
Public Sale	5%	500,000,000
Ecosystem & Community	25%	2,500,000,000
Treasury & Development	18%	1,800,000,000
Liquidity & Market Making	12%	1,200,000,000
Strategic Partnerships	8%	800,000,000
Team Allocation	7%	700,000,000
Marketing & Growth	3%	300,000,000
Reserve Fund	2%	200,000,000

Roadmap

Phase 1 - Foundation

- Website deployment
- Token launcher
- Wallet connection
- Smart contract verification
- Basic wallet intelligence
- Analytics dashboard
- Mobile compatibility
- BNB Chain deployment

Phase 2 - Intelligence Expansion

- Smart money tracking
- Whale activity feeds
- Real-time monitoring
- Advanced token analytics
- Base and Polygon support

Phase 3 - AI Infrastructure

- AI intelligence engine
- Predictive analytics
- Risk scoring systems
- Institutional dashboards
- Advanced monitoring tools

Phase 4 - Ecosystem Scaling

- Global partnerships
- CEX integrations
- API infrastructure
- Institutional tooling
- Cross-chain intelligence network

Conclusion

Pison is building more than a token launcher. The platform is evolving into intelligent blockchain infrastructure that combines token deployment, analytics, wallet intelligence, and smart behavioral monitoring within a unified ecosystem. The future of blockchain is not only creation. It is intelligence.
